Abu Zafar Mohammad Saleh Billah Mishkat

Full-Stack Developer, Data Science and AI

sbmishkat10@gmail.com | 0174951015 (Mobile and WhatsApp) | linkedin.com/in/saleh-billah | github.com/mishkat2025
22/3/1 North South Tower, Road 3, Nandipara, Khilgaon, Dhaka, Bangladesh

PROFESSIONAL SUMMARY

Full-stack developer with a Data Science and AI focus who can take a product from a client's requirements to a live, maintained system. Builds web applications end to end with React, Node.js, Express and MongoDB, designs role-based access and authentication, and deploys and runs them on self-managed Linux servers with Nginx and PM2. On the AI side, builds retrieval-augmented generation (RAG) pipelines using hybrid search and locally hosted language models, backed by Python, PyTorch and machine learning fundamentals. Learns the technology underneath each tool well enough to troubleshoot it and own it in production.

EDUCATION

BSc in Computer Science and Engineering | East West University, Dhaka — Expected: 2027
Major: Intelligent Systems and Data Science. Additional coursework in Software Engineering.

Alim (Higher Secondary), GPA 4.81 out of 5.00 | Tamirul Millat Kamil Madrasah — 2021

Dakhil (Secondary), GPA 4.72 out of 5.00 | Tanzimul Ummah Alim Madrasah — 2019

WORK EXPERIENCE

FREELANCE FULL-STACK DEVELOPER | Coaching Business (Client), Dhaka — 2026 – PRESENT

- The teacher needed one system to manage students, courses and attendance, and a way to give parents prompt reports on how their children were performing.
- Designed and built a role-based student management system with separate access for teachers, teaching assistants and students, covering courses, attendance, assignments, materials, announcements, grades and progress tracking. Built with React, Node.js, Express and MongoDB, with authentication, file uploads and payment handling, and deployed on a self-managed server using Nginx and PM2.
- The system is live in production. The teacher now manages courses, attendance and grading from one place, students submit work and track their own progress, and downloadable grade reports keep parents informed. Maintenance and feature updates are ongoing.

PROJECTS

EWU BULLETIN RAG ASSISTANT | github.com/mishkat2025/rag-project-bluebook — 2026

- Program and policy details are spread across the long East West University bulletin, which makes a specific answer slow to find by reading.
- Built a retrieval-augmented generation (RAG) question-answering system in Python. Implemented hybrid retrieval that combines semantic search over ChromaDB vector embeddings with BM25 keyword search, and integrated a locally hosted Gemma model through LM Studio to answer from the retrieved passages.
- The assistant works as a chatbot that answers bulletin questions in plain language, with responses grounded in the retrieved bulletin text and the language model running entirely on a local machine.

SKILLS

Programming: Python, C/C++, JavaScript, SQL, Java

AI and Data: Machine Learning, PyTorch, Pandas, Transformers, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), ChromaDB

Web and Backend: React, Node.js, Express, REST APIs, MongoDB, PostgreSQL

Tools and Deployment: Git, GitHub, Docker, Linux, Nginx, PM2, Coolify

LANGUAGES

Bangla: Native **English:** Proficient **Arabic:** Moderate
